BC078974
Clone distribution: MGC clone distribution information can be found through the I.M.A.G.B. Consortium/LLNL at: http://image.llnl.gov Scrice: IRAK Flate: 182 Row: f Column: 6 This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NIH-MGC Project URL: http://mgc.nci.nih.gov

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, from a library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from muscle, normalised, and poly A-trimmed. BcoRI-NotI cut cDNA was then ligated into the vector. Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host: Escherichia coli DH10B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Direct Submission

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the OSGPLP protein; and (5) the use of the OSGPLP polynucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        O-sialogycoproteinase-like protein and encoding polynucleotide, useful for diagnosing, preventing and treating related diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2058

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated nucleic acid molecule (I) encoding a metalloprotease (MP-1). (I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an aberrant glutemate transport or motor neuron disorder, such as a myotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive associated with MP-1 activity, e.g. diabetes, cancer, reproductive cor Cushing's syndrome, neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, huntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. Alzheimer's disease, pulmonary diseases (e.g. AlDS, rheumatoid arthritis or sepsis), pulmonary diseases (e.g. Dremonita, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This sequence represents a metalloprotease MPI polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence: 2197

                                                                                                                                                                                                                                                                                                     The invention relates to an isolated polypeptide comprising: any of 28 CC sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acid sequences, 94% identical to a sequence CC of 703 or 267 amino acids, 96% identical to a sequence of 414 amino acids, or 97% identical to a sequence of 422 amino acids, all given in CC the specification; or a biologically active or immunogenic fragment of the isolated polypeptide. The polypeptides and polymucleotides are useful CC with the decreased expression of protein modification and maintenance CC molecules (PMOD), such as cell proliferative diseases (e.g. cancer, CC altergies), neurological disorders (e.g. stroke, Parkinson's disease, CC epilepsy), gastrointestinal (e.g. ulcer, cirrhosis), reproductive (e.g. crocer) and ccidinaterinal (e.g. ulcer, cirrhosis), reproductive (e.g. condetrions (e.g. bacterial, viral, parasitic, protozoal). These are also CC useful in assessing the effects of exogenous compounds on the expression of cragments are useful in screening compounds for effectiveness as agonist CC ranget polymucleotide and compounds that specifically bind to or modulate CC target polymucleotide and compounds that specifically bind to or modulate CC target polymucleotide and compounds that specifically bind to or modulate CC the activity of the polypeptides, or in altering the expression of the activity of the polypeptides. The microarray is useful in monitoring CC conding a human PMOD protein of the invention
                                                                                                                                                                                              Alignment Scores:

The present invention relates to novel 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid molecules which encode adenosine deaminase, glycoprotease or seven transmembrane domain (?TM) receptor family members. Sequences of the invention are useful in diagnosing and treating cancer or aberrant cellular proliferation and/or differentiation (e.g. colon or lung cancer), immune disorders (e.g. selective IgA deficiency, rheumatoid

They are also useful in screening assays, predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenetics) and prophylactic and therapeutic methods. The nucleic acids may also be used in chromosome mapping, tissue typing and forensic biology and as surrogate markers. Sequences of the invention are also used in gene therapy. The present sequence is human glycoprotease

The invention relates to an isolated 38650 (encoding adenosine CC deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7 CC transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or CC a sequence which is at least 60% identical to the six nucleic acids or CC their open reading frames, fragments of at least 15 nucleotides, CC naturally occurring variants, or a DNA insert of the plasmid deposited CC with the American Type Culture Collection as Accession No. not defined in CC the specification, which encodes the amino acid sequence). Also included are a host cell containing the nucleic acids (used to produce the protections) the encoded proteins, an antibody that selectively binds to CC the polypeptide, and identifying a compound that binds to/modulates the CC activity of the polypeptide. The nucleic acid molecules, polypeptides and CC methods are useful for diagnosing, treating cancer, aberrant cellular CC proliferation and/or differentiation, immune disorders, heart disorders, CC haematopoeitic disorders, blood vessel disorders, brain disorders, pain CC and metabolic disorders, liver disorders and platelet disorders (many ceamples of these disorders are given in the specification). The present cc sequence is the Human CDNA 28472 encoding a glycoprotease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated 38650, 28472, 5495, 65507, 81588 and 14354 nucleic acid molecules, useful for diagnosing, treating cancer, pain, or immune, heart, endothelial cell, hematopoeitic, blood vessel, brain, metabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (GLUC/) GLUCKSMANN M
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ĕ

New adenosine deaminase, glycoprotease and seven transmembrane nucleic acids and polypeptides, designated 38650, 28472, 5495, 81588 and 14354, useful for treating e.g. leukemias, Hodgkin's hypertension. 65507, disease õ

Claim 2; Fig 8A-B; 178pp; English

CC The invention describes isolated 38650, 28472, 5495, 65507, 81588 and CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The CC 38650 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding a human glycoprotease. The 5495, 65507, 81588 and 14354 comprise CC sequences that encode a human seven transmembrane domain (7TM). The CC 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid and polypeptide CC sequences are useful for diagnosing, preventing or treating a subject CC with or at risk of developing a disorder, e.g. cancer or aberrant CC with or at risk of developing a disorder, e.g. cancer or aberrant CC collular proliferation and/or differential disorders, heart disorders, collular proliferation and/or differential disorders, heart disorders, broan disorders, pain and metabolic disorders, CC cardiovascular disorders, endothelial disorders, heart disorders, collude carcinoma, sarcoma, leukaemia, Hodgkin's disease, autoimune disorders include carcinoma, sarcoma, leukaemia, Hodgkin's disease, autoimune disorders, farction, CC ischaemic heart disease, aneurysm, cerebral ischaemia, peripheral colluderome, Raynaud's disease, aneurysm, cerebral ischaemia, peripheral colluders, Alzheimer's disease, Parkinson's disease, anorexia nervosa, CC cachexia or diabetes. This sequence encodes the novel human glycoprotease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                    The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isogai T, Sugiyama T,

Example 2; SEQ ID NO 7447; 210pp; English.

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression in the first soft tissue samples and comparing the expression in the first soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

Novel polypeptide useful for treating neurodegenerative diseases, myeloid or lymphoid cell disorders, bone disorders, mechanical and traumatic disorders, coagulation disorders, and inflammatory diseases.

Claim 1; Page; 612pp; English

AIZDELMET'S disease); autoimmune disease (e.g. systemic lupus erythematosus, rheumatoid arthritis, insulin-dependent diabetes mellitus); myeloid or lymphoid cell disorders (e.g. anaemia and thrombocytopaenia); wounds, ulcers, burns, bone disorders (e.g. osteoporosis, osteoarthritis); mechanical and traumatic disorders (e.g. stroke, head trauma); lung or liver fibrosis; reperfusion injury in various tissues; bacterial, viral or fungal infections; allergic conditions such as allergic rhinitis, asthma; coagulation disorders (e.g. haemophilia); cancer and tumours; and inflammatory diseases (e.g. septic shock, Crohn's disease, anaphylaxis). The protein may be used to inhibit the growth, infection or function of infectious agents such as bacteria, fungi, viruses, or to effect bodily characteristics, biorhythms or circadian cycles of rhythms. The protein may also have cycles of rhythms. The protein may also have proliferation/differentiation, stem cell growth lateral sclerosis); neurodegenerative diseases (e.g. Parkinson's disease, Alzheimer's disease); autoimmune disease (e.g. systemic lupus This invention relates to the cDNA sequences encoding an isolated novel human polypeptide. The protein encoded by the nucleic acid of the invention is useful for treating central and peripheral nervous system diseases (e.g. peripheral neuropathy, Huntington's disease, amyotrophic immune stimulating or suppressing, chemotactic/chemokinetic factor, haematopoiesis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 음 성
The present invention describes a non-human transgenic animal (I) CC comprising a disruption in a protease target gene (PG) selected from CC calcium activated neutral protease type 5 (CAPN5) gene, tryptase 4 gene CC and sialoglycoprotease-like gene. Also described is a targeting construct CC (II), comprising a first polymuclectide sequence homologous to at least a CC first portion of PG, a second polymuclectide sequence homologous to at CC least a second portion of PG and a selectable marker. (II) is useful for CC producing a transgenic mouse comprising a disruption in a protease target CC gene, by introducing (II) into a cell introducing the cell into a CC blastocyst, implanting the resulting blastocyst into a pseudopregnant course, where the pseudopregnant mouse gives birth to a chimeric mouse, CC and breeding the chimeric mouse to produce the transgenic mouse. (I) is useful for identifying an agent to the expression or function of a protease target gene, by administering an agent to (I) and CC determining whether the expression or function of the disrupted protease target gene in (I) is modulated. (I) is also useful for testing the cefficacy of proposed genetic and pharmacological therapies for human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAPNS; tryptase 'neurological; neugene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel transgenic animal, comprising a disruption in protease target gene, is useful for identifying agents that ameliorates a phenotype associated with a disruption in a protease target gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 3; Fig 7; 62pp; English.

(I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an aberrant glutamate transport or motor neuron disorder, such as amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders (e.g., Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kalman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Huntington's diseases (Alzheimer's disease, Puntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis or sepsis), pulmonary disease (e.g. premmonia, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This sequence represents a metalloprotease MP1 polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1526 BP; 484 A; 297

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnostic and therapeutic polynucleotide; dithp; antiarteriosclerotic; antiinflammatory; cerebroprotective; antiipaemic; antidiabetic; immunosuppressive; neuroprotective; nootropic; neuroleptic; tranquilizer osteopathic; antiarthritic; antirheumatic; cytostatic; hepatotropic; virucide; haemostatic; anti-HIV; antithyroid; thyromimetic; dermatological; antibacterial; fungicide; antiparasitic; anticonvulsant; thrombolytic; anticoagulant; anorectic; vasotropic; antiucer; gene therapy; protein replacement therapy; human; gene; ds.
                                                                             The invention relates to a novel isolated human diagnostic and therapeutic polynucleotide (designated dithp). The novel dithp polynucleotide comprises: any of 188 DNA sequences consisting of 195-779 base pairs fully defined in the specification; a polynucleotide comprising a naturally occurring polynucleotide sequence at least 90% identical to the dithp polynucleotide; a polynucleotide complementary to the dithp polynucleotide or its polynucleotide which is at least 90% identical; or an NNA equivalent of any of the polynucleotides mentioned above. The dithp polynucleotides have the following activities:
antiarteriosclerotic, antiinflammatory, cerebroprotective, antilipaemic, antidiabetic, immunosuppressive, neuroprotective, nootropic, neuroleptic tranquilizer, osteopathic, antiarthritic, antirheumatic, cytostatic,
                                                                                                                                                                                                                                                                                                                                                                     Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                New human diagnostic and therapeutic polynucleotides and polypeptides, useful for diagnosing, treating or preventing e.g. leukemia, brain cancer, atherosclerosis, AIDS, thyroiditis, infections, obesity, strok

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABE7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
